Comments:	Date:

Introduction

A hotel management system was defined as a system that enabled a hotel or group of hotels to manage front-office capabilities.such as booking reservations, guest checkin/checkout, room assignment, managing room rates, and billing. The program we are going to make is provide us information on reserving rooms, book an event, check the features etc. This program is untroublesome as it will serve the admin or user to be updated about the records without any strain and it is favored much by the people involved in the business sector. As we are aware of the busy and hectic schedule of business people, this Hotel management system turns out to be a great relief for them. This program definitely has a wide scope to minimize errors in the making of bills and it also limits the delay of delivering bills to the customers which can include taxes on the basis of their expenditure.

OBJECTIVES/AIMS

- 1. Provide people seeking hotel rooms with accurate information about available accommodations.
- 2.To make it easy for customers to make reservation.

- 3.To make it easy for customers to get their questions answered, lowering barriers to selecting this chain's hotels.
- 4. To allow staff to easily update information in the system, and have the system inform everyone who needs to know.
- 5. Allow booking of rooms without errors and without creating conflicts.

IMPLEMINAION

```

Enter Room number of the customer to search its details:
101

Record Found

Room Number: 101

Name: rayhan
Address: chowdhury
Phone number: 01878549122
Nationality: Bangladeshi
Email: crayhan42@gmail.com
Period: 2
Arrival date: 4/28/2022
```

Delete customer record:

```
"C:\Users\User\Desktop\Project proposal\project\HotelMgmt C Updated\Hotel Management System
Enter the Room Number of the hotel to be deleted from the database:
101
The Customer is successfully removed....
```

CONCLUSION

Hotel management system now-a-day have the advantage of modernization. Computer have done the work more easy. Computer is playing an important role in management. Reports are made on daily basis for every customer check in or check out which can easily be seen by the management. Hotel management system has also primary purpose is to provide facilities to customers. A software for computers makes the things many times easy, these are made as user friendly and to keep a check and balance in hotel management and accounts as well. So, these things are important.
